***Allowable Subject Matter***

Claims 2-4, 8-11, 13-15, 18-22 are allowed.

The following is an examiner's statement of reasons for allowance:

Claim 10 recites an integrated circuit system having a plurality of macros comprises a reference voltage generator for generating and providing a reference voltage for driving at least one voltage generator, wherein the reference voltage generator and the at least one voltage generator provide voltage to a substrate bias level voltage generator, a negative word line level voltage generator, and a boosted word line high level voltage generator, and an enable register coupled to the voltage limiter, the oscillator and the charge pump, wherein the enable register is configured for storing one of an enable and disable signal, for isolating each of the plurality of macros from the external voltage supply, and for enabling or disabling at least the voltage limiter, the oscillator and the charge pump according to the stored signal.

Claim 20 recites an integrated circuit system having a plurality of macros comprises the at least one of the plurality of internal voltage supply generators is selected from the group consisting of a substrate bias level voltage generators, a negative word line level voltage generator, and a boosted word line high level voltage generator, and an enable register coupled to the voltage limiter, the oscillator and the charge pump, wherein the enable register is configured for storing one of an enable and disable signal, for isolating each of the plurality of macros from the external voltage supply, and for enabling or disabling at least the voltage limiter, the oscillator and the charge pump according to the

stored signal. The references of record do not teach or suggest the aforementioned limitation, nor would it be obvious to modify those references to include such limitation.
